

Free access to climate observations from Germany - DWD's Climate Data Center (CDC)

F. Kaspar, A. Kaiser-Weiss, E. Penda, and F. Kratzenstein

Deutscher Wetterdienst, National Climate Monitoring, Offenbach, Germany (frank.kaspar@dwd.de)

DWD's Climate Data Center provides access to several categories of national and international climate data. Since 2014 the amount of data that can be freely accessed has been significantly expanded. The presentation will provide an overview over the various data categories and the portals where these data can be accessed. The data are based on the observing systems of DWD for Germany as well as international activities of DWD.

DWD continuously works on the improvement of the data bases, e.g. by digitizing historic documents and quality-control. DWD's CDC provides access to national and international station-based meteorological data, derived parameters, gridded products and special categories as e.g. phenological data. Station data are provided together with relevant information on the station history.
