The Europe Team	IV
Preface	V
1. Introduction	1
1.1 Background	1
1.1.1 Previous and related manuals	1
1.1.2 Sources of material and contributing projects	1
1.2 Use of this manual	1
1.3 Principal types of structures	2
1.4 Definitions of key parameters and principal responses	3
1.4.1 Wave height	4
1.4.2 Wave period	4
1.4.3 Wave steepness and Breaker parameter	5
1.4.4 Parameter h^*	7
1.4.5 Toe of structure	7
1.4.6 Foreshore	7
1.4.7 Slope	8
1.4.8 Berm	8
1.4.9 Crest freeboard and armour freeboard and width	8
1.4.10 Permeability, porosity and roughness	10
1.4.11 Wave run-up height	11
1.4.12 Wave overtopping discharge	12
1.4.13 Wave overtopping volumes	13
1.5 Probability levels and uncertainties	13
1.5.1 Definitions	13
1.5.2 Background	14
1.5.3 Parameter uncertainty	16
1.5.4 Model uncertainty	16
1.5.5 Methodology and output	17
2. Water levels and wave conditions	18
2.1 Introduction	18
2.2 Water levels, tides, surges and sea level changes	18
2.2.1 Mean sea level	18
2.2.2 Astronomical tide	19
2.2.3 Surges related to extreme weather conditions	19
2.2.4 High river discharges	20
2.2.5 Effect on crest levels	21
2.3 Wave conditions	22
2.4 Wave conditions at depth-limited situations	23
2.5 Currents	26
2.6 Application of design conditions	27
2.7 Uncertainties in inputs	28
3. Tolerable discharges	29
3.1 Introduction	29
3.1.1 Wave overtopping processes and hazards	29
3.1.2 Types of overtopping	30
3.1.3 Return periods	31
3.2 Tolerable mean discharges	32
3.3 Tolerable maximum volumes and velocities	36
3.3.1 Overtopping volumes	36
3.3.2 Overtopping velocities	37
3.3.3 Overtopping loads and overtopping simulator	37
3.4 Effects of debris and sediment in overtopping flows	39

4. Prediction of overtopping	40
4.1 Introduction	40
4.2 Empirical models, including comparison of structures	40
4.2.1 Mean overtopping discharge	40
4.2.2 Overtopping volumes and V_{max}	44
4.2.3 Wave transmission by wave overtopping	46
4.3 PC-OVERTOPPING	51
4.4 Neural network tools	55
4.5 Use of CLASH database.	60
4.6 Outline of numerical model types	62
4.6.1 Navier-Stokes models	63
4.6.2 Nonlinear shallow water equation models.	63
4.7 Physical modelling	64
4.8 Model and Scale effects	65
4.8.1 Scale effects.	65
4.8.2 Model and measurement effects	65
4.8.3 Methodology.	66
4.9 Uncertainties in predictions	67
4.9.1 Empirical Models	67
4.9.2 Neural Network	68
4.9.3 CLASH database	68
4.10 Guidance on use of methods	68
5. Coastal dikes and embankment seawalls	70
5.1 Introduction	70
5.2 Wave run-up	71
5.2.1 History of the 2% value for wave run-up	77
5.3 Wave overtopping discharges	77
5.3.1 Simple slopes	77
5.3.2 Effect of roughness	85
5.3.3 Effect of oblique waves	90
5.3.4 Composite slopes and berms	93
5.3.5 Effect of wave walls	97
5.4 Overtopping volumes	99
5.5 Overtopping flow velocities and overtopping flow depth	100
5.5.1 Seaward Slope	102
5.5.2 Dike Crest	103
5.5.3 Landward Slope	107
5.6 Scale effects for dikes.	109
5.7 Uncertainties	109
6. Armoured rubble slopes and mounds	111
6.1 Introduction	111
6.2 Wave run-up and run-down levels, number of overtopping waves.	112
6.3 Overtopping discharges	117
6.3.1 Simple armoured slopes	117
6.3.2 Effect of armoured crest berm	120
6.3.3 Effect of oblique waves	120
6.3.4 Composite slopes and berms, including berm breakwaters	121
6.3.5 Effect of wave walls	124
6.3.6 Scale and model effect corrections	125
6.4 Overtopping volumes per wave.	126
6.5 Overtopping velocities and spatial distribution	127
6.6 Overtopping of shingle beaches.	129
6.7 Uncertainties	129
7. Vertical and steep seawalls	130
7.1 Introduction	130
7.2 Wave processes at walls	132

7.2.1	Overview	132
7.2.2	Overtopping regime discrimination – plain vertical walls	134
7.2.3	Overtopping regime discrimination – composite vertical walls	135
7.3	Mean overtopping discharges for vertical and battered walls	136
7.3.1	Plain vertical walls	136
7.3.2	Battered walls	140
7.3.3	Composite vertical walls	141
7.3.4	Effect of oblique waves	142
7.3.5	Effect of bullnose and recurve walls	145
7.3.6	Effect of wind	148
7.3.7	Scale and model effect corrections	149
7.4	Overtopping volumes	151
7.4.1	Introduction	151
7.4.2	Overtopping volumes at plain vertical walls	151
7.4.3	Overtopping volumes at composite (bermed) structures	153
7.4.4	Overtopping volumes at plain vertical walls under oblique wave attack	153
7.4.5	Scale effects for individual overtopping volumes	154
7.5	Overtopping velocities, distributions and down-fall pressures	154
7.5.1	Introduction to post-overtopping processes	154
7.5.2	Overtopping throw speeds	154
7.5.3	Spatial extent of overtopped discharge	155
7.5.4	Pressures resulting from downfalling water mass	156
7.6	Uncertainties	157
	Glossary	158
	Notation	160
	References	164
	A Structure of the EurOtop calculation tool	173
