PIANC REPORT N° 195

ENVIRONMENTAL COMMISSION

AN INTRODUCTION TO APPLYING ECOSYSTEM SERVICES FOR WATERBORNE TRANSPORT INFRASTRUCTURE PROJECTS

12 April 2021

PIANC has Technical Commissions concerned with inland waterways and ports (InCom), coastal and ocean waterways (including ports and harbours) (MarCom), environmental aspects (EnviCom) and sport and pleasure navigation (RecCom).

This report has been produced by an international Working Group convened by the Environmental Commission (EnviCom). Members of the Working Group represent several countries and are acknowledged experts in their profession.

The objective of this report is to provide information and recommendations on good practice. Conformity is not obligatory and engineering judgement should be used in its application, especially in special circumstances. This report should be seen as an expert guidance and state-of-the-art on this particular subject. PIANC disclaims all responsibility in the event that this report should be presented as an official standard.

TABLE OF CONTENTS

TABLE OF CONTENTS	1
GLOSSARY	3
LIST OF ABBREVIATIONS.....	4
PIANC WG 195 MEMBERS	5
ACKNOWLEDGEMENTS	6
SUMMARY	7
1. INTRODUCTION – SETTING THE SCENE	8
1.1 Background	8
1.2 Aim and Scope	8
1.3 Target Audience	9
1.4 Related PIANC Initiatives and Reports	9
1.5 Link to Global Initiatives.....	10
1.6 Report Structure	11
2. AN INTRODUCTION TO ECOSYSTEM SERVICES	12
2.1 Background	12
2.2 Applicability of the ES Concept in the WTI Sector	14
2.3 ES Benefits for the WTI Sector	15
2.4 Applying ES Concepts to Decision Making.....	18
3. ECOSYSTEM SERVICES ASSESSMENTS IN WTI PROJECTS	19
3.1 The WTI Project Cycle and ES Roles.....	19
3.1.1 Design Phase.....	20
3.1.2 Implementation Phase	21
3.1.3 Evaluation & Adaptation Phase.....	22
3.2 Ecosystem Service Assessment (ESA)	22
3.2.1 What is an ESA?.....	22
3.2.2 General Steps – The Generic ESA Framework	22
3.2.3 Linking ESA to the WTI Project Cycle	29
3.3 ES Assessment Types.....	30
3.3.1 Baseline ESA.....	31
3.3.2 Prospective ESA	33
3.3.3 Retrospective ESA.....	35
3.3.4 Adaptive ESA.....	37
4. CASE STUDIES	39
4.1 Introduction.....	39
4.2 Illustrations of Applying the ES Concept Across the Project Cycle	39
4.3 Illustrations of ES Assessed in WTI Projects	41
4.4 Reflections and Lessons Learnt	43
5. CONCLUSIONS AND RECOMMENDATIONS	45
5.1 Recap	45
5.2 Key Messages	45
5.3 Future Work	46
REFERENCES.....	47
APPENDIX 1 CASE STUDIES.....	51
C1 CASE STUDY 1: MAASVLAKTE II, PORT OF ROTTERDAM.....	51
C2 CASE STUDY 2: RELOCATION OF DREDGED MATERIAL IN THE WESTERN SCHELDT.....	54
C3 CASE STUDY 3: HORSESHOE BEND.....	57
C4 CASE STUDY 4: SIGMAPLAN	60
C5 CASE STUDY 5: NICARAGUA CANAL	63
C6 CASE STUDY 6: MASTERPLAN 2050 FOR EMS ESTUARY	66
C7 CASE STUDY 7: COFFS HARBOUR NORTHERN BREAKWATER UPGRADE	69
C8 CASE STUDY 8: BLUE CARBON PILOT PROJECT	73

LIST OF FIGURES

Figure 1: The 'cascade model' of ecosystem service generation and valuation highlights the links between biophysical aspects/biodiversity and human well-being (adapted from MEA, 2005).	12
Figure 2: The iterative cycle of a typical WTI project: nine stages (blue boxes) during three main phases (orange arrows)	20
Figure 3: Five major steps of the ESA framework. These are underlain by stakeholder consideration and involvement, and may be adaptively optimised using learning and feedback.....	23
Figure 4: ES assessment types and ES monitoring to support the different phases of the WTI project cycle.....	29
Figure 5: ESA type properties linked to the WTI project cycle	31
Figure 6: Overview of how the eight case studies illustrate potential applications of the ES concept along the entire project cycle	40

LIST OF TABLES

Table 1 : Indicative list of stakeholder categories and expected relevance of this report to these different groups	9
Table 2 : ES classification with a broad ES typology, detailed ES categories, including both biotic and abiotic services, and their links with the broad WTI sector	14
Table 3 : The role of ESA in decision-making process (adapted from Apitz (2013)).	18
Table 4 : Eight WTI case studies considering ES in one or more phases of their project cycle.	39
Table 5 : The case studies applied the ES concept in several of the project stages	41
Table 6 : Ecosystem Service studied in WTI case study projects.	42
Table 7 : Positive reflections and potential improvements/limitations from the case studies for several aspects of applying ESA.....	44

LIST OF BOXES

Box 1 : Global Biodiversity Targets and Sustainable Development Goals related to ES and WTI.	11
Box 2 : Case study example of Regulating services (source image: www.portseattle.org)	13
Box 3 : Examples of the benefits of including of ES concepts in a WTI projects.....	16
Box 4 : Illustration of benefits from applying an ES approach	17
Box 5 : Decommissioning as a final stage in the WTI project cycle but a new project cycle on its own?	22
Box 6 : How to select priority ES for WTI projects.....	25
Box 7 : Different tools for ES quantification (qualitative, quantitative, monetary)	27
Box 8 : Societal cost-benefit analysis for the Sigmaplan, Belgium	28
Box 9 : ES monitoring is required to understand and validate project impacts (provides primary data input for a Retrospective and Adaptive ESA)	30
Box 10 : Example of benefits from combining different end goals into one project (part of a baseline ESA)	32
Box 11 : Example of a prospective ESA - ESIA of the Interoceanic Nicaragua Canal	34
Box 12 : Monitoring program for the Maasvlakte 2 project.	35
Box 13 : Example case study of a retrospective ESA introduced post-construction, Horseshoe Bend (USA)	37
Box 14 : Example case study proving the relevance of a proper monitoring program as the basis for conducting an adaptive ESA - Western Scheldt (The Netherlands)	38
Box 15 : ESA in the decommissioning phase.....	38
Box 16 : Summary of key messages for ESA implementation in WTI projects	46
