INFRASTRUCTURE FOR THE DECARBONISATION OF INLAND WATERWAY TRANSPORT

InCom Task Group 234 – August 2023

PIANC REPORT N° 234

INLAND NAVIGATION COMMISSION

INFRASTRUCTURE FOR THE DECARBONISATION OF INLAND WATERWAY TRANSPORT

August 2023

PIANC has Technical Commissions concerned with inland waterways and ports (InCom), coastal and ocean waterways (including ports and harbours) (MarCom), environmental aspects (EnviCom) and sport and pleasure navigation (RecCom).

This report has been produced by an international Task Group convened by the Inland Navigation Commission (InCom). Members of the Task Group represent several countries and are acknowledged experts in their profession.

The objective of this report is to provide information and recommendations on good practice. Conformity is not obligatory and engineering judgement should be used in its application, especially in special circumstances. This report should be seen as an expert guidance and state-of-the-art on this particular subject. PIANC disclaims all responsibility in the event that this report should be presented as an official standard.

CONTENTS

1	General aspects	5
1.1	Scope	5
1.2	Introduction	5
1.2.1	Terms of Reference	5
1.2.2	Objective	5
1.2.3	Related PIANC Reports	5
1.2.4	Members of the Task Group	6
1.2.5	Meetings	6
1.3	Approach	6
2	Key developments related to decarbonisation of IWT	7
2.1	Key developments per country or organisation	7
2.1.1	Short Report Decarbonisation IWT Europe	7
2.1.2	Short Report Decarbonisation IWT CCNR	7
2.1.3	Short Report Decarbonisation IWT Austria	7
2.1.4	Short Report Decarbonisation IWT France	8
2.1.5	Short Report Decarbonisation IWT Germany	8
2.1.6	Short Report Decarbonisation IWT Netherlands	8
2.2	Key developments per energy carrier	9
2.2.1	Short Report Hydrogen for Propulsion	9
2.2.2	Short Report Biofuel for Propulsion	9
2.2.3	Short Report Methanol for Propulsion	10
2.2.4	Short Report Battery Electric Propulsion	11
3	Relevant questions for waterway managers	11
3.1	General	11
3.2	List of Questions	11
3.2.1	What are the most promising technologies (or energy carriers) for the decarbonisation of IWT?	12
3.2.2	What is the overall transport challenge in my network (amount of cargo, number of passengers, from where to where, now and in the future)?	12
3.2.3	What is the state of the water transport network and of the fleet that operates on it (proportion of vessels of given type/classification, now and in the future, alternative transport modes)?	12
3.2.4	What is the energy consumption that is associated with the transport challenge, given the current and future state of the network as well as of the fleet and the waterway conditions in the future the considering impacts of climate change? (Emission hotspots?)	13
3.2.5	What type of energy carriers can replace the current ones, what quantities of fuel are needed where, and how will these fuels affect range, payload, velocity, etc.?	15
3.2.6	Where should we position bunkering points or refuelling stations? What are the charging/fuelling times and the waiting times at refuelling stations?	16
3.2.7	How can the estimated demand for alternative fuels (electricity, hydrogen, methanol, etc.) be supplied over the network?	16
3.2.8	What are the standards or existing regulations that must be followed?	16
4	SUGGESTED APPROACH	16
5	CONCLUSIONS	17
6	REFERENCES	18
	APPENDIX A: TERMS OF REFERENCE	20
