## Guidelines for Sustainable Inland Waterways and Navigation

EnviroCom  
Report of WG 6  
2003

INTERNATIONAL NAVIGATION ASSOCIATION

- 1.0 Introduction**
- 2.0 Background and Approach**
  - 2.1 Need
  - 2.2 Approach
  - 2.3 Assessment of Navigation Projects
  - 2.4 Achieving Sustainability
- 3.0 Waterway Functions**
  - 3.1 Overview
  - 3.2 Waterway Ecosystems
  - 3.3 Functions
  - 3.4 Waterway Uses
  - 3.5 Criteria and Measurement of Functions and Uses

- 4.0 Inland Navigation Requirements Relative to Functions**
- 4.1 Introduction
- 4.2 Conservancy and management of navigable natural waterways
- 4.3 Hydraulic phenomena associated with navigation in confined waters
- 4.4 Nautical management of an IWT route
- 4.5 Fairway improvement
- 4.6 Shipping and other uses, in particular environment and flood control
- 4.7 IWT design guidelines
- 5.0 Sustainability Assessment Procedure**
- 5.1 Strategic Planning
- 5.2 Project Planning / Process of Planning Navigation Projects
- 5.3 Methods of Estimating Environmental Costs
- 5.4 Monitoring and Adaptive Management

## **Appendices**

### **Appendix 1 - Steps in evaluating navigation projects for sustainability**

#### **Appendix 2 - Case studies**

- A2.1 Case Study 1 - Securing the Kiel Canal (Section Rendsburg East) - KC-km 61,580 to KC-km 66,150 in Germany, Schleswig-Holstein (BfG-0788, 1995)
- A2.2 Case Study 2 - Improving Navigability on the River Waal (The Netherlands)
- A2.3 Case Study 3 - Development of the River Rhône in France
- A2.4 Case Study 4 - Eliminating a Bottleneck on the German Danube
- A2.5 Case Study 5 - Balancing the Environment and Development on the Parana-Paraguay Waterway in South America
- A2.6 Case Study 6 - Environmental Remediation of the Upper Mississippi and Missouri River Systems in the United States
