
1. SHIPPING IN THE TRANSPORT SECTOR. DIFFERENT MODES OF TRANSPORT, THEIR ENERGY CONSUMPTIONAND HARMFUL EFFECTS ON THE ENVIRONMENT.
1.1 General
1.2 Operational pollution
1.2.1 Air pollution
1.2.2 Nuclear waste pollution
1.2.3 Water pollution
1.2.4 Soil pollution
1.2.5 Noise pollution
1.3 Summary of prioritised areas for shipping with regard to environmental pollution
2. EXHAUST EMISSIONS
2.1 Transport modes and their exhaust emissions
2.2 Analysis of shipping figures and comparison between alternative transport modes
2.3 Conclusions and possible measures to improve the environmental situation by using inland and river/sea shipping

2.4 Possible incentives, regulations and recommendations to promote the use of low polluting vessels for longer transport of goods within Europe
3. NOISE POLLUTION
3.1 The different transport modes and their noise pollution
3.1.1 Road traffic
3.1.2 Railway traffic
3.1.3 Air traffic
3.1.4 Ship traffic
3.1.5 Ports and terminals
3.2 Comparison of noise levels between different transport modes
3.2.1 Road traffic
3.2.2 Rail traffic
3.2.3 Waterway traffic
3.2.4 Summary of comparison
4. WATER OUTLETS AND RECEPTION FACILITIES
4.1 General
4.2 Disposal of ship-generated wastes in inland navigation
4.2.1 The present situation
4.2.2 The future system of an integrated waste disposal in inland navigation
4.2.2.1 In general
4.2.2.2 Principles of the agreement
4.2.2.3 Treatment of operational wastes
4.2.2.4 Cargo waste and waste water
4.3 International sea traffic: reception facilities for ship-generated waste
4.3.1 The International Maritime Organization and the Comprehensive Manual for Port Reception Facilities
4.3.2 The European Commission and Shore Reception Facilities for Ship's Waste
4.3.3 The Baltic Sea Area and the Baltic Strategy for Port Reception Facilities for Ship-generated Wastes and Associated Issues
4.4 Conclusions
5. ENVIRONMENTALCOSTS FOR DIFFERENT TRANSPORT MODES
6. APPENDICES
7. REFERENCES
