Report of WG 21 - April 2005

## **Economic aspects of inland waterways**

INTERNATIONAL NAVIGATION ASSOCIATION

- 1. INTRODUCTION**
  - 1.1 Scope of the report
  - 1.2 Working Group members
- 2. BASIC PARAMETERS AND FACTORS IN SOCIO-ECONOMIC FEASIBILITY CALCULATIONS**
  - 2.1 General problem and situation
  - 2.2 Basic principles and parameters in socioeconomic feasibility calculations
  - 2.3 Principle of overall economic approach
  - 2.4 With/without principle
  - 2.5 Alternative cost principle
  - 2.6 Discounting rate
  - 2.7 Base year
  - 2.8 Calculation period
  - 2.9 Residual value of the investment

- 2.10 Traffic forecast methods
- 2.11 Cost-benefit ratio
- 3. EVALUATION OF THE COSTS AND BENEFITS OF TRANSPORT INFRASTRUCTURE**
- 3.1 General context of costs in the different transport systems
- 3.2 Construction cost
- 3.3 Infrastructure running costs
- 3.4 Vehicle costs
- 3.5 Transshipment costs and terminal transport
- 3.6 Value of time savings
- 3.7 External effects
- 3.8 Some problems of cost allocation
- 4. INTERMODAL ASPECTS**
- 4.1 The general problem.
- 4.2 Criteria for modal split between the various transport modes
- 4.3 Strengths and weaknesses of different transport modes
- 4.4 Competition and cooperation between the different transport modes
- 4.5 Cost comparison between rail, road and waterway transport
- 4.6 Aspects at the EU level
- 4.7 General recommendations for future cooperation between inland shipping and competing transport modes
- 5. EVALUATION OF NON-TRANSPORT COSTS AND BENEFITS OF TRANSPORT INFRASTRUCTURE**
- 5.1 Spatial effects of infrastructure investments
- 5.2 Employment effects
- 5.3 Non-transport functions of inland waterways
- 6. THE NEED FOR FURTHER RESEARCH**
