CLASSIFICATION OF SOILS AND ROCKS FOR THE MARITIME DREDGING PROCESS
- ABRIDGED FIELD VERSION -

2017
PIANC has Technical Commissions concerned with inland waterways and ports (InCom), coastal and ocean waterways (including ports and harbours) (MarCom), environmental aspects (EnviCom) and sport and pleasure navigation (RecCom).

This report has been produced by an international Working Group convened by the Maritime Navigation Commission (MarCom). Members of the Working Group represent several countries and are acknowledged experts in their profession.

The objective of this report is to provide information and recommendations on good practice. Conformity is not obligatory and engineering judgement should be used in its application, especially in special circumstances. This report should be seen as an expert guidance and state-of-the-art on this particular subject. PIANC disclaims all responsibility in the event that this report should be presented as an official standard.
TABLE OF CONTENTS

Part 1: Introduction and Outline of the Main Report .................................................. 3
  1.1 Context .................................................................................................................. 3
  1.2 Purpose of the Field Document ................................................................. 3
  1.3 Definitions ............................................................................................................ 3
  1.4 Description, Testing and Classification of Soils and Rocks ...................... 4
  1.5 Site and Ground Investigation ..................................................................... 4
  1.6 Soil, Rocks and Dredging Processes ........................................................... 4
  1.7 Disclaimer ......................................................................................................... 6
Part 2: Classification and Description .................................................................... 7
  2.1 Soils .................................................................................................................. 7
    2.1.1 General Basis of Classification ............................................................. 7
    2.1.2 Parameters for Classification ............................................................... 7
    2.1.3 Soil Description ....................................................................................... 8
    2.1.4 Laboratory Testing .............................................................................. 13
  2.2 Rocks .............................................................................................................. 15
    2.2.1 General Basis of Classification ............................................................. 15
    2.2.2 Rock Material Classification ............................................................... 15
    2.2.3 Classification of Rock Mass ................................................................. 16
    2.2.4 Rock Description ................................................................................... 17
  2.3 Intermediate Material ..................................................................................... 22
Standards ..................................................................................................................... 23
Abbreviations ............................................................................................................. 23
References ................................................................................................................... 24

LIST OF FIGURES

Figure 2.1: Comparison of PIANC and selected national classification systems .......... 11
Figure 2.2: Logging pro forma for the field identification of soils for the maritime dredging process ............................................................................................................. 12
Figure 2.3: Examples of RQD and FI determinations on rock core............................ 16

LIST OF TABLES

Table 1.1: Material properties of importance for various dredging processes ............ 5
Table 2.1: Classification, identification and description of soils for dredging purposes ...... 10
Table 2.2: In-situ and laboratory testing of soils for dredging purposes ...................... 14
Table 2.3(a): Descriptive entries for the engineering geological description of rock material .......................................................... 19
Table 2.3(b): Classification of bedded rocks (top left) and aid to identification of igneous and metamorphic rocks (bottom left) for engineering purposes. Right: engineering classification of calcareous rock ........................................................................... 20
Table 2.4: In-situ and laboratory testing procedures of rocks for dredging purposes .......... 21
Table 2.5: Range of laboratory and field test values for soils, intermediate material and rocks and Coffey Geotechnics appraisal of cementation grade (based on UCS) ......................... 22
