## State-of-the-Art of Designing and Constructing Berm Breakwaters

MacCaus  
Report of WGI 40  
2003

INTERNATIONAL NAVIGATION ASSOCIATION

1. **INTRODUCTION**
2. **PRACTICAL EXPERIENCE WITH BERM BREAKWATER**
3. **ENVIRONMENTAL CONDITIONS**
4. **STABILITY AND RESHAPING OF BERM BREAKWATERS**
  - 4.1 Governing parameters
  - 4.2 Reshaping of berm breakwaters for waves normal to the breakwater trunk
  - 4.3 Longshore transport for oblique waves
  - 4.4 Stone velocity
  - 4.5 Redistribution of stone size down the berm slope
  - 4.6 Stability of round heads
  - 4.7 Stability of the rear side
5. **REFLECTION, RUN-UP, OVERTOPPING AND TRANSMISSION**
  - 5.1 Governing parameters
  - 5.2 Reflection

- 5.3 Run-up
- 5.4 Overtopping
- 5.5 Transmission
- 6. MATERIAL SPECIFICATIONS**
- 6.1 Rock type, rock quality and quarry yield
- 6.2 Stone breaking due to wave impact while rolling
  - 6.2.1 Breaking and abrasion strength of stones
  - 6.2.2 Drop tests on quarried rock
  - 6.2.3 Combining results of stone velocity results and drop test results
  - 6.2.4 Conclusions on breaking strength evaluation method
- 7. LIMIT STATE DESIGN ON HYDRAULIC STABILITY**
- 8. SOIL STABILITY**
- 9. FILTERS**
- 9.1 Available filter criteria for coastal structures
- 9.2 Concluding remarks on filters
- 10. SCOUR AND SCOUR PROTECTION**
- 10.1 Scour
- 10.2 Scour protection
- 11. CONSTRUCTION METHODS**
- 12. PROBABILITY ANALYSIS OF HYDRAULIC STABILITY**
- 13. COSTS**
